SOP for Power Cable Replacement in Lift			

3. Remove all three phase HRC fuse from the Lift panel at the ground Floor
4. Barricade around the lift at ground floor, go to the Junction box floor
5. Fix the roller pulley in suitable place above the cable hanging
6. Tie the head end of rope in the fixed column and opposite end of rope with hanging cable through roller pulley and hold tightly
7. Disconnect the power cable from the outgoing terminals of the Junction box and remove the cable clamps.
8. Lose the rope slowly till cable reaches the ground floor.
9. Disconnect the old power cable from the incoming terminals of the Lift Cabin control panel and remove it away.
10. Unknot the cable from the rope and remove the cable away.
11. Lay the new power cable up to cabin control panel, terminate and connect it in the incoming terminal.
12. Knot the other end of cable with rope and pull it up to junction box. ( must have some sag)
13. Fix the cable in the clamp and connect it in the junction box.
14. Remove the pulley and ropes.
15. Connect the HRC fuse in mains controls panel.
16. Get the line clearance and Switch ON the lift feeder.
17. Take trail run of lift and record three phase current.
18. If it is found normal, surrender the work permit. Otherwise take LOTO of the feeder and cross check everything once again.
19. Do the house keeping and Update the maintenance record.
20. Close the work permit.
